

CCFC Visiting Scientist Program

The CCFC Visiting Scientist program is designed to allow Canadian institutions to bring in productive scientists having expertise not available within the institution, and to allow Canadian scientists to visit major international research centers in order to acquire knowledge or new techniques related to IBD research.

For visiting scientists to Canada, the sponsoring institution must identify the candidate's special expertise and the expected long-term research benefits of the visit. Visiting scientists to Canada will receive a travel grant equal to direct economy airfare, and financial assistance will be provided for housing and living expenses. If the visit results in a loss of income, financial assistance will be provided. The host laboratory may apply for a research allowance to cover some of the costs of materials, supplies, and expendables required for participation in the research program to a maximum of \$50,000.

For visiting scientists from Canada, the visit must result in the applicant acquiring knowledge about new research concepts or technology related to IBD research, and the sponsoring institution must guarantee the return of the Canadian scientist to his/her position following completion of the award. Visiting Scientists from Canada will receive a travel grant equal to direct economy airfare, and financial assistance will be provided for housing and living expenses. If the visit results in a loss of income, financial assistance will be provided. A research allowance to cover some of the costs of materials, supplies, and expendables deemed essential for their participation in the research program may be applied for to a maximum of \$50,000.

Length of visit can range from 1 month (minimum) to 12 months (Maximum).
